

The event is focused on reviewing the research needs in Micro and Nano Manufacturing and inform H2020 about future priorities in this field.

The [4M2020](#) programme is organising a Foresight Forum from the 9th to 11th September 2014 in Grenoble to review the research needs in Micro and Nano Manufacturing and inform H2020 about future priorities in this field.

On behalf of the 4M2020 consortium, the Coordinator of HINMICO project as representative of the **HINMICO** Consortium has been invited at this event. Peers discussions will be animated and structured in clusters of technologies / application domains. Main challenges and recommendations will be formulated towards strategic and coherent R&D efforts in support of the EU industry and value chains in Micro and Nano Manufacturing. This Forum is an opportunity for the Micro and Nano Manufacturing community to discuss and define its vision and future priorities in the context of H2020, and to identify potential future high-impact projects.

Dr. Erastos Filos, Project Officer in charge of 4M2020, is actively supporting this foresight event and will be attending the workshop with the Project Technical Advisor.
