

More than 40 representatives of 20 European Projects in the micro nanomanufacturing field met in Grenoble on September 9<sup>th</sup>-11<sup>th</sup> in a Workshop organized by 4M2020 project.

Projects were assigned to the four cluster identified: Production and manufacturing,

Environment and safety /consumer goods, Health and ICT / Optics and photonics.

Most of the time was devoted to collect common research interests in order to establish a micro and nano technology roadmap complementary to already elaborated by Nanofutures and Manufuture. The final aim is to provide to the Commission a specific vision from the multi material micro nano manufacturing community where HINMICO partners are very active.

The final report with the collection topics of interest will be available by the end of the year.
